# Introduction

Note that you may have multiple `\include` statements here, e.g. one for each subsection.

General structure of this chapter should read as follows. This chapter should be used to motivate your study and answer the question "Why is this important?" Also, it should define what you set out to achieve (these will be revisited in the conclusions chapter). You should describe your approach to the Aims and Objectives, including an evaluation part.

- Give a systematic overview of papers with related/similar work
- Highlight similarities/differences to your work (perhaps in the form of a table)

Note that this section may be sectioned based on the different aspects of your dissertation.

# Materials & Methods

This section should include a recipe of what you did (explain what you have done so if someone wants to reproduce the experiment, they can). A flow chart is typically helpful. Also, make sure to define all software that you used including version numbers and OS. Should also include a description of statistical methods used (if any).[1]

## 3.8 | Acronyms

In the early nineties, GSM was deployed in many European countries. Global System for Mobile communication (GSM) offered for the first time international roaming for mobile subscribers. The GSM's use of Time Division Multiple Access (TDMA) as its communication standard was debated at length. And every now and then there are big discussions about whether Code Division Multiple Access (CDMA) should have been chosen over TDMA.

If you want to know more about Global System for Mobile communication (GSM), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA) and other acronyms, just read a book about mobile communication. Just to mention it: There is another Used Acronym (UA), for testing.

## 3.9 | Tables

A beautiful table is shown in Table 3.1, data from Ebejer et al. (2012).

## 3.12 | Theorems

**Theorem 3.12.1.** *Let $f$ be a function whose derivative exists in every point, then $f$ is a continuous function.*

**Theorem 3.12.2** (Pythagorean theorem)**.** *This is a theorem about right triangles and can be summarised in the next equation*

$$x^2 + y^2 = z^2$$

And a consequence of Theorem 3.12.2 is the statement in the next corollary.

**Corollary 3.12.2.1.** *There's no right triangle whose sides measure 3 cm, 4 cm, and 6 cm.*

You can reference theorems, such as Theorem 3.12.2, when a label is assigned.

## 3.18 | Referencing

Use `\textcite` for in-text citations, e.g. Einstein (1905), and `\parencite` for citations in parentheses. And this is what an online reference looks like (LLC, 1999).

In their study, Einstein (1905) show the world is round. Others have shown this to be the case (Arrighi, 2003; Ebejer et al., 2016).

# Results & Discussion

Should include a reiteration of the experiments, and their outcome. Together with a description (discussion). Preamble should include a reminder of the aims and objectives together with a list of experiments to achieve these. Should include many charts and other visualisations with appropriate descriptions.[1]

# Evaluation

In an ideal world, you should have two kinds of evaluation. The first is against some ground truth (perhaps a random model?). The second kind of evaluation is against other people's work (accuracy, speed, etc.). Any dimension of interest should be evaluated. Evaluation should be statistically sound.

# Conclusion

This section should have a summary of the whole project. The original aims and objectives and whether these have been met should be discussed. It should include a section with a critique and a list of limitations of your proposed solutions. Future work should be described, and this should not be marginal or silly (e.g. add machine learning models). It is always good to end on a positive note (i.e. 'Final Remarks').
